

Hello Provider: I want to receive the hepatitis B vaccine.

The U.S. Centers for Disease Control and Prevention (CDC) recommends the hepatitis B vaccine for all newborns, children, adults 19-59 years of age, and adults 60 and older who are at high-risk for infection.

I am aware that the hepatitis B vaccine is 2 or 3-doses, and can be given over 1 month or 6 months depending on what vaccine I receive. Please let me know which of the vaccines on the chart below you offer.

 U.S. Adult Hepatitis B Vaccine Schedules			
Vaccine	Dose 1	Dose 2	Dose 3
3-dose vaccine series Brand names: Engerix-B, Recombivax HB, Twinrix (hepatitis A and B), PreHevbrio	Now	1 month after dose 1	6 months after dose 1
2-dose vaccine series Brand name: Heplisav-B	Now	1 month after dose 1	

If you have any questions or concerns about the vaccine, please ask your healthcare provider. For more information about the hepatitis B vaccine, visit www.hepb.org or call 215-489-4900.
